(2) the details of subsequent stages of selection and multiplication;

(3) evidence of uniformity and stability; and

(4) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified

(1) identify these varieties and state all differences objectively;

(2) attach statistical data for characters expressed numerically and demonstrate that these are clear differences; and

(3) submit, if helpful, seed and plant specimens or photographs (prints) of seed and plant comparisons which clearly indicate distinctness.

Exhibit C forms are available from the PVPO Office for most crops; specify crop kind. Fill in Exhibit C (Objective Description of Variety) form as completely is possible to describe your variety.

Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.

Section 52(5) of the Act requires applicants to furnish a statement of the basis of the applicant's ownership. An Exhibit E form is available from the PVPO.

If "Yes" is specified (seed of this variety be sold by variety name only, as a class of certified seed), the applicant MAY NOT reverse this affirmative decision after the variety has been sold and so labeled, the decision published, or the certificate issued. However, if "No" has been specified, the applicant may change the choice. (See Regulations and Rules of Practice, Section 97.103).

See Sections 41, 42, and 43 of the Act and Section 97.5 of the regulations for eligibility requirements.

EXHIBIT A

Origin and Breeding History of Nela (Triticum aestivum L.)

1. Genealogy

Nela is selected out of the following crossing:

HE 2394 * Selektia in 1984. HE 2394 is owned by the breeder but has never been commercialised as a variety. The background of this line can not be traced back to any commercial available variety. Selektia has been listed in the Czech Republic in the past and is available to the public.

In 1986 a single plant was selected in the F3, followed by line selection and replicated yield trials.

The breeding process was carried out at the breeding station in Hrubcice in the South of the Czech Republic. This station is situated on 30 ha land on heavy clay soil and is equipped with all the necessary facilities including lab facilities and greenhouses.

2. Breeding goals

The breeding goals were:

<u>Generation</u>	<u>Criteria for selection</u>
F2 plant selection	General type
F3 line selection	Diseases Lodging resistance
F4 line selection	Diseases Agronomic characteristics Baking quality Yield
F5 line selection	Diseases Agronomic characteristics Baking quality Yield
F6 line selection	Diseases Agronomic characteristics Baking quality Yield

Exhibit A-bis

Evidence of Uniformity and Stability of Nela (*Triticum aestivum* L.)

Nela has been tested in official DUS trials in the Czech Republic in the years 1996-1998. Based on the results from these trials the official authorities have concluded the following:

1. During the testing years no variants were observed, thus confirming the Uniformity of Nela.
2. Over the years Nela has proven to be a Stable variety.

Exhibit B - revised

Statement of Distinctness of Nela (*Triticum aestivum* L.)

Nela has been found Distinct from all other known varieties but is most similar to Estica. However Nela can be distinguished from Estica in the characteristics, as described in the following table. The data in this table have been recorded in trials in Hrubcice, Czech Republic.

		Estica	Nela
